

## Envion Ranked No. 5 in Energy in Fast Company's 2010 World's Most Innovative Companies Rankings

Washington D.C., February 18, 2010 -- Fast Company has honored Envion Inc., a Washington D.C. based renewable waste-to-energy company, in its 2010 World's Most Innovative Companies issue. Envion was ranked No. 5 in the energy category.

To create this year's Most Innovative Companies issue, Fast Company's editorial team analyzed information on thousands of businesses across the globe. The result is a package unlike that of any other business media. It's not just about revenue growth and profit margins; it's about identifying creative models and progressive cultures – to define the many forms of innovation that exist across the business landscape.

"It was invigorating to engage with so many exciting new ideas and developments," said Fast Company editor Robert Safian. "Our goal was to offer a snapshot of the creativity at work in the global marketplace, and to inspire the Fast Company audience with illustrations of how powerful and effective business can be."

"Envion is honored to be part of such a tremendous list of accomplished companies," said Founder and Chief Executive Officer Michael Han. "We believe our technology truly has the power and potential to dynamically alter the way plastic waste is managed globally, and to contribute to the universal pursuit of energy independence in an environmentally-sustainable manner."

Fast Company's Most Innovative Companies issue (March 2010) is on newsstands now, and is online at <http://www.fastcompany.com/>

### **About Envion Inc.**

Envion Inc. has developed and created a first of its kind plastic waste to oil conversion platform and is actively manufacturing, marketing, and licensing its proven technology for the U.S. market, with potential international expansion. The Envion Oil Generator™ is designed to convert petroleum-based plastics into synthetic light-medium oil that can be further refined to produce commercial fuels such as gasoline, kerosene, jet fuel, and diesel. The Envion process of plastic waste reuse addresses a host of critical issues ranging from plastic waste management, plastic production, the landfill capacity crisis, petroleum reserve depletion/fossil fuel conservation, greenhouse gas emissions, and the overall reduction of the world's carbon footprint.
